## DETAILED ACTION

### *Allowable Subject Matter*

**Claim 1-18, 20-38 and 40-42** are allowed.

The following is an examiner's statement of reasons for allowance: The present invention directed to method and system of managing multimedia broadcast. The independent claims identify uniquely distinct feature "managing a transform task from the source, wherein managing the transform task includes launching the transform task; conducting a transform task, on the record data stream; sending a service data stream to a sink for output; managing a sink task from the source, wherein managing the sink task includes launching the sink task; " , " a central processing unit including; a source capable of receiving a multimedia broadcast, wherein the source is suitable for generating a record data stream representing the multimedia broadcast; a transform connected to the source, wherein the transform is capable of conducting a transform task on the record data stream from the source, and wherein the source is capable of launching tasking of the transform; a sink connected to the source and the transform, wherein the sink is capable of providing a playback data stream to an output device; and wherein the source manages the source, transform and sink, wherein the sink and the transform are capable of post interrupting the source" , "A method for managing multimedia broadcast presentations, comprising: managing a source task by a sink including launching the source task, wherein source tasks include: receiving a multimedia broadcast signal including at least two media component portions; generating a record data stream representing the multimedia broadcast signal;

decoupling component media portions of the record data stream; buffering the record data stream including decoupled component portions by the source; sending the buffered record data stream to a transform; managing a transform task from the sink, wherein managing the transform task includes launching the transform task; conducting a transform task, on the source data stream received from the source; managing a sink task from the sink, wherein managing the sink task includes launching the sink task” , “a central processing unit including; a source capable of receiving a multimedia broadcast, wherein the source is suitable for conducting a source task; a transform connected to the source, wherein the transform is capable of tasking buffering of the source data stream from the source, and wherein the source is capable of launching tasking of the transform; and a sink connected to the source and the transform, the sink is capable of providing a playback data stream to an output device; and wherein the sink manages the source, transform and sink, wherein the source and the transform are capable of post interrupting the sink”
